### Wood Finish Care - Hard Maple Wood

Integra has designed all our seating and tables for superior strength, beauty, and durability over an extended period of time. As with any wood product, special care should be taken to prolong the beauty and life of the wood.

#### All Wood Finishes:

- Clean with a damp cloth of mild detergent/water solution. Make sure to wipe dry with a clean, lint free, soft cloth.
- Avoid using ammonia-based cleaners, waxes, solvents, and other chemicals.
- Avoid using abrasive cleaning compounds.
- Avoid exposure to extreme fluctuations in temperature and humidity
- Encourage the use of drink coasters and placemats (for horizontal surfaces where items can be placed).
- Avoid exposure to direct sunlight
- Avoid close exposure to heat sources (fireplaces, heating vents, etc. . .)
- If any liquid spills on the wood, clean off as soon as possible. Wood is porous and will absorb liquids.

The selection of a nonporous surface such as an acrylic solid surface like Corian®, HI-MACS®, etc, or a high-pressure laminate top is strongly recommended for surfaces that will be used in dining or areas with food or in areas that will be cleaned extensively with chemicals.
